

ConferenceMe

ConferenceMe is an easy-to-use desktop videoconferencing software application used to connect to a videoconferencing event when a traditional IVN classroom is not available.

Students must have a computer with web camera, headset with microphone, and a fast, wired Internet connection. They are provided with instructions on how to setup and install the software via the web from IVN.

ConferenceMe can be used for students at remote locations without access to an IVN classroom. Examples of other uses include:

- One student at a site for a graduate level course.
- Other videoconference rooms in the student's area are not available for that date/time.
- Other videoconference rooms are available but will access a fee to the student.

This feature and scheduling it should be discussed further with your IVN Site or Technical Coordinator.
